MAPS

TABLES

## HOW TO READ THE MAPS

The municipal indices are plotted using GIS tools and technology. Maps are made for the individual indicators, the composite indices and the over-all poverty index.

**Seven intervals** are used in the maps. Three intervals with ranges 0-33.9 percent (best) , 34-66.9 percent (better) and 67-99.9 percent (good) represent the performance of the municipalities whose achievements are better than the average provincial values. The 100-133.9 percent range would include the municipalities with performance at least equal to but not more than one-and-a-half times the provincial value. Similarly, the 134-166.9 percent (bad), 167-199.9 percent (worse) and 200 percent and over (worst) ranges would indicate the municipalities that are above the provincial average.

LEGEND		
RANGE		RATING
0 - 33.9		Best
34 - 66.9		Better
67 - 99.9		Good
100 - 133.9		Average
134 - 166.9		Bad
167 - 199.9		Worse
200 and above		Worst
	No data	
Province = 100		

The poverty maps applied a **red to green color scheme**. This is to better distinguish the difference between the municipalities and readily identify municipalities that need intervention. Having seven intervals, the three classes are in the shades of red, three are in the shades of green and one that is in the **middle uses the shade of light yellow**. The **white** color is used to portray an area without and/or missing data.

The three intervals of 0-33.9 percent, 34-66.9 percent and 67-99.9 percent use the shades of green, using a darker shade of green for 0-33.9 percent, a lighter shade of green for 34-66.9 percent and the lightest shade of green for the 67-99.9 percent interval. Thus, a **darker shade of green** portrays the **best situation** as compared to the other municipalities of the province. The **light yellow** shade is portrayed with the values 100-133.9 percent. This range is within the provincial index of 100, meaning indices less than 100 percent indicates a better situation than the overall performance of the province. Those indices that have a higher value than 100 percent indicate a worse situation than the provincial performance. Three intervals are used for this, the 134-166.9 percent, the 167-199.9 percent and the 200 percent and over interval. The first two intervals use **lighter shades of red** to portray the alarming performances of the municipalities. The **darkest red or maroon** shade is used for the 200 percent and above interval so that it would give the viewer an instant picture of which area has an alarming situation or has the **worst situation** among the municipalities within the province.

# 2009 & 2011 MBN Data Gathered

## Survival

- Food and Nutrition
  - Newborn with Birthweight Less Than 2.5 kg
  - Malnourished Children 0-6 Years Old
- Health
  - Child Deaths (Under 5 Years Old)
  - Infant Deaths (Below 1 Year Old)
  - Population to Health Worker Ratio
- Water and Sanitation
  - HH with No Access to Safe Water

## Enabling

- Basic education
  - Elementary Non-survival Rate

## Security

- Peace and Order
  - Crime Against Person
  - Crime Against Property
